
Cookiecutter Django Minimal

Release 0.3.0

Alexandr Stefanitsky-Mozdor

Apr 07, 2020

CONTENTS

1	Contents:	1
1.1	Tutorial	1
1.2	Features	1
1.3	cookiecutter-django-minimal	2
2	Indices and tables	3

CONTENTS:

1.1 Tutorial

1. Install [Cookiecutter](#).
2. Create project template.

```
cookiecutter https://github.com/stefanitsky/cookiecutter-django-minimal.git
project_name [My Project]: My Personal Blog
project_slug [my_personal_blog]: blog
author [Alexandr Stefanitsky-Mozdor]:
email [stefanitsky.mozdor@gmail.com]:
version [0.1.0]:
timezone [UTC]: Europe/Moscow
```

3. Open created folder.

```
cd blog
```

4. Run project via ready-to-use [docker](#) and [make](#).

```
make development-up
```

5. Open <http://0.0.0.0:8000/>.

1.2 Features

1.2.1 Project structure

The project structure is similar to [RoR](#) project structure, where application is in one folder. Templates, static files, fixtures, media - everything is configured to be stored in the folder with the main application.

1.2.2 Bump versions

The project has a configured version controller - `bump2version`

Usage:

```
bump2version [options] part [file]
```

It changes the version for the project, including `sentry`.

1.2.3 Makefile

Makefile contains many convenient and useful commands. You can get a complete list of commands by typing `make help`.

1.3 cookiecutter-django-minimal

A cookiecutter template for creating minimal Django apps, with configured settings for multiple environments.

1.3.1 Highlights

- Minimal setup: only the most important.
- Preconfigured settings & compose files for multiple environments.
- Configuration as in the RoR application for main app folder.

INDICES AND TABLES

- `genindex`
- `modindex`
- `search`
